

—Comment—
The Veterans Affairs' Financial Management System (FMS) is a standardized, VA-wide system that interfaces externally with the Department of the Treasury, the General Service Administration, the Internal Revenue Service, the Defense Logistics Agency, and various commercial vendors and banks for electronic billing and payment purposes. It is VA's core financial management system that interfaces internally with the Integrated Funds Control Point Activity (IFCAP) Accounts Receivable system and other subsystems such as Integrated Billing. This process model shows a sample use (in this case, medical billing) of VAs FMS.
